Welcome to our 35th Annual Spring Bull Roundup!

We are proud to present this year's offering of Hereford cattle and Quarter Horses that bear our brands as a trademark of performance, quality and proven genetics.

What a time to be in the cattle business! Cattle markets are the best ever and everyone is feeling optimistic about the future of this business. Now is the time to position ourselves for the future by investing in superior genetics. We feel our 2014 offering is exactly where we need to be for those progressive producers concerned with their bottom line.

For years, we have retained ownership on all our commercial steers and heifers and fed them through CNB, a natural branded-beef program. Through collection of this data, we have made significant progress in our feedlot performance and carcass quality. We have summarized three years' data on pg. 2 of our catalog. Our customers have learned how to interpret the data to increase carcass premiums in several branded beef programs while sacrificing nothing in the maternal equation. For the past three years, our customers' cattle have ranked #1 for "Net Dollars Returned to the Ranch." Figured for the time when cattle leave the ranch as 800# yearlings through the finishing phase, Net Dollars includes cost-of-gain, health, feed-to-gain, carcass wt. and carcass premiums. That documents over-all, bottom-line profit for HHR genetics! This data, collected from 2010 to 2013 on 110,238 total cattle fed by 220 ranches showed an average \$174 profit per head for Harrell influenced genetics over the average of all cattle on feed.

Today, we use every tool available to make the most rapid genetic improvement possible in a very competitive industry. Genomic-Enhanced EPDs are the next phase in breed improvement strategies allowing us and our commercial customers to make the most accurate and rapid genetic improvement yet. Currently, all H5 maternal grandsires and current sires have been GE-EPD tested, along with many 2014 H5 sale bulls designated with the GE-EPD logo. It's another example of our commitment to provide the most accurate and reliable genetics for our valued customers.

Please join the Harrell, Thomas, and Mackenzie families for our Western Ranchers Event with three big days of good cattle, good horses and good western hospitality. We extend a special invitation for "The Cowboy Gathering" Monday evening following our sale. Join us at the Geiser Grand Hotel for an evening of western fellowship with fellow cattlemen and industry leaders hosted by Harrell Hereford Ranch, Thomas Angus Ranch and Zoetis Animal Health.

Please call with questions and we'll look forward to seeing you sale day!

HARRELL HEREFORD RANCH ...PERFORMANCE GENETICS DRIVEN BY DOLLARS AND CENTS OF THE BEEF INDUSTRY!

Since 1971, Harrell Hereford Ranch has produced performance Hereford seedstock for commercial ranchers. Today, that focus continues as they breed total performance genetics based upon decisions that are economically driven by dollar return versus cost.

Real profit starts at the ranch with cowherd function, efficiency and longevity. It continues with total feedlot gain and feed to gain ratio; and it ends with carcass value versus discounts. In basic terms that's ...cows bred, live calves, problem-free, low maintenance cows, good doing cattle, improving carcass yield and quality grade without sacrificing cowherd traits, and eliminating Yield Grade 4's.

Harrell's continually evaluate their seedstock program utilizing every tool technology has made available ...American Hereford TPR in-herd records, carcass ultrasound, EPDs and GE-EPDs. And, they go a larger step forward evaluating H5 genetics in the real world of bull customers' commercial cowherds and feedlot and carcass programs using rancher cowherd spread sheets, feedlot closeouts and carcass grid data. Their total effort is objective, the stock are compared and decisions are made without the bias of pedigree, showing type nor herd bull dollars invested.

Stated Bob Harrell, "Our seedstock genetic decisions are based upon a commercial cowman's breeding philosophy. It's "dollars and cents" beef industry driven. Who produces ...who makes the premiums ...and how much does it all cost."

The chart documents H5 Hereford genetics excel for Harrell bull customers...

20%	-.013	.45	.13
40%	-.003	.33	.07
60%	.006	.23	.02
80%	.018	.12	-.03
Low Value	.151	-.62	-.41

PERFORMANCE CATTLE FROM THE HIGH COUNTRY OF EASTERN OREGON

AMERICAN HEREFORD 50K GE-EPDs

GE-EPDs (*Genomic Enhanced - Expected Progeny Differences*) are the next, most scientifically advanced, accurate tool for objective beef cattle performance evaluation. The American Hereford Assn. is the first breed registry to develop its own genomic program using DNA tests to build GE-EPDs. A multi-year project, scientific researchers, National Beef Cattle Evaluation Consortium (NBCEC), USDA and now, GeneSeek Lab, NE, have been involved. AHA now has access to all the breed's genotypes, phenotypes (actual performance) and pedigrees to continue building the most accurate Hereford specific gene panel in the world. Data from 1200 high accuracy, 50K genotyped sires and eight "whole genome sequenced" sires is basis for the Hereford genomic predictions.

Hereford specific prediction equations are formed for each trait based on genetic variation associated with a subset of markers from a panel that scores 50,000 (50K) DNA markers for each animal. Predictions based on that animal's specific genotypes (inherited genetic material) are produced for each trait. Each genomic prediction may draw information from several hundred up to several thousand individual markers across the animal's genome. (*Some DNA tests only establish connections with a few hundred markers for all traits.*)

This DNA-based breeding value data is combined with phenotype (actual performance) through conventional EPDs to produce the 50K GE-EPDs. In short, GE-EPDs are result of current EPDs based upon actual pedigree and performance data, plus DNA based genomic data.

50K GE-EPDs are the most accurate evaluation tool cattlemen now have due to the massive data base and advanced science that drives it. Available on all traits evaluated through AHA Total Performance Records, GE-EPDs increase the accuracy on young, non-parent animals to the equivalent of having produced eight to 15 progeny depending upon the trait.

AHA GE-EPDs powered by 50K allow breeders to offer genetics backed by even more reliable, complete data increasing the value of potential sire and replacement heifer prospects.

The advantages...

IMPROVED SIRE SELECTION

- Select highly proven sires for extensive use based upon breeding objectives
- Genetic outlier young sires are ID'd sooner to accelerate herd improvement
- Specific trait sires can be selected...CE, Maternal, Growth, Carcass

REPLACEMENT FEMALES

- More accurate, complete evaluation of genetic strengths and weaknesses at a younger age
- Predict genetic merit with accuracies higher than a lifetime of natural calf production
- More informed selection of ET Donors

ET PROGENY

- Determine genetic differences between ET siblings at a young age independent of recip dam effects

GE-EPDs increase the accuracy and integrity of breeder data allowing more reliable, valuable breeding stock selections. That contributes to more rapid genetic progress and more profitable beef production.

Harrell Hereford Ranch, as a Hereford breed leader, has genomic tested their entire herd sire battery, foundation maternal sires and ET Donor dams. This 2012 sale presents a select number of yearling bull prospects with GE-EPDs to benefit their and your future herdsire selections.
