Welcome to our 34th Annual Spring Bull Roundup!

We are proud to present this years' offering of Hereford cattle and Quarter Horses that bear our brands as a trademark of performance, quality and proven genetics.

Our Harrell Hereford Ranch family philosophy is to continually work hard for our customers and help take advantage of every genetic, breeding and marketing opportunity that benefits them now and in the future. Producing superior seedstock allows for the survivability of our customers and family and insures that future generations in our community and at Harrell Hereford Ranch can enjoy the lifestyle we are fortunate to call our own.

To achieve this goal, we feel you must have 'firsthand' knowledge of the beef cattle industry, from conception to consumption. Over 25 years ago, we started a commercial cow herd that allowed us to see the economically important traits 'firsthand.' We have experienced what it means for a cow to survive on her own, calve unassisted, bring in a live calf and rebreed every year and survive on marginal feed in tough winters and in drought-stricken summers.

For 15 years, we have retained ownership on all our commercial steers and heifers. Collection of this data has enabled us to make significant progress for carcass value while not sacrificing anything in the maternal equation. Our customers have learned how to interpret the data to increase carcass premiums in several branded beef programs.

In recent years, we have sent on over 1200 DNA samples to build DNA profiles on every animal in the herd. We're using it to find both, positive strengths as well as weaknesses that might affect the Hereford breed's progress. Today, the American Hereford Association has combined EPDs with 50K genetic profiles to give members the tools for faster genetic improvement within the breed. Genomic-enhanced EPDs are the next phase in breed improvement strategies that will allow cattlemen to make even more accurate decisions and more rapid genetic progress. This year, 95% of all our maternal grandsires have been GE-EPD tested. In addition, a select group of H5 bulls in this year's sale carry the GE-EPD logo, another example of our dedication and continued quest to provide the best and most reliable genetics for our valued customers.

Please join the Harrell, Thomas, and Mackenzie families for our big, 3-day Western Ranchers Event. It begins Sunday, March 3rd at the Mackenzie Ranch Headquarters with our Harrell-Mackenzie Quarter Horse Preview, our 34th annual Spring Bull Roundup held at Harrell Hereford Ranch on Monday, March 4th, concluding on Tuesday, March 5th with the Thomas Angus Ranch Annual Spring Bull Sale.

We extend a special invitation for "The Cowboy Gathering" on Monday evening, 6:00 p.m. following our sale. Join us at the Geiser Grand Hotel for an evening of western fellowship with fellow cattlemen and industry leaders hosted by Harrell Hereford Ranch, Thomas Angus Ranch, and Pfizer Animal Health.

Plan on three big days of good cattle, good horses and good western hospitality. Please call with questions and we'll look forward to seeing you on sale day!

HARRELL HEREFORD BULLS

PERFORMANCE CATTLE FROM THE
HIGH COUNTRY OF EASTERN OREGON

AMERICAN HEREFORD 50K GE-EPDs

GE-EPDs (Genomic Enhanced - Expected Progeny Differences) are the next, most scientifically advanced, accurate tool for objective beef cattle performance evaluation. The American Hereford Assn. is the first breed registry to develop its own genomic program using DNA tests to build GE-EPDs. A multi-year project, scientific researchers, National Beef Cattle Evaluation Consortium (NBCEC), USDA and now, GeneSeek Lab, NE, have been involved. AHA now has access to all the breed's genotypes, phenotypes (actual performance) and pedigrees to continue building the most accurate Hereford specific gene panel in the world. Data from 1200 high accuracy, 50K genotyped sires and eight "whole genome sequenced" sires is basis for the Hereford genomic predictions.

Hereford specific prediction equations are formed for each trait based on genetic variation associated with a subset of markers from a panel that scores 50,000 (50K) DNA markers for each animal. Predictions based on that animal's specific genotypes (inherited genetic material) are produced for each trait. Each genomic prediction may draw information from several hundred up to several thousand individual markers across the animal's genome. (Some DNA tests only establish connections with a few hundred markers for all traits.)

This DNA-based breeding value data is combined with phenotype (actual performance) through conventional EPDs to produce the 50K GE-EPDs. In short, GE-EPDs are result of current EPDs based upon actual pedigree and performance data, plus DNA based genomic data.

50K GE-EPDs are the most accurate evaluation tool cattlemen now have due to the massive data base and advanced science that drives it. Available on all traits evaluated through AHA Total Performance Records, GE-EPDs increase the accuracy on young, non-parent animals to the equivalent of having produced eight to 15 progeny depending upon the trait.

AHA GE-EPDs powered by 50K allow breeders to offer genetics backed by even more reliable, complete data increasing the value of potential sire and replacement heifer prospects.

The advantages...

IMPROVED SIRE SELECTION

- Select highly proven sires for extensive use based upon breeding objectives
- Genetic outlier young sires are ID'd sooner to accelerate herd improvement
- Specific trait sires can be selected...CE, Maternal, Growth, Carcass

REPLACEMENT FEMALES

- More accurate, complete evaluation of genetic strengths and weaknesses at a younger age
- Predict genetic merit with accuracies higher than a lifetime of natural calf production
- More informed selection of ET Donors

ET PROGENY

- Determine genetic differences between ET siblings at a young age independent of recip dam effects

GE-EPDs increase the accuracy and integrity of breeder data allowing more reliable, valuable breeding stock selections. That contributes to more rapid genetic progress and more profitable beef production.

Harrell Hereford Ranch, as a Hereford breed leader, has genomic tested their entire herd sire battery, foundation maternal sires and ET Donor dams. This 2012 sale presents a select number of yearling bull prospects with GE-EPDs to benefit their and your future herdsire selections.
